The Evolution of E/E Architecture and the Impact on Future Software Development

Using Vector AUTOSAR Basic Software and DaVinci Tools in Combination With Simulink

Evolution of Vehicle Architectures

Distributed Architecture

- ▶ ECUs implement dedicated function
- ▶ One supplier per ECU
- ▶ Limited amount of data shared between ECUs

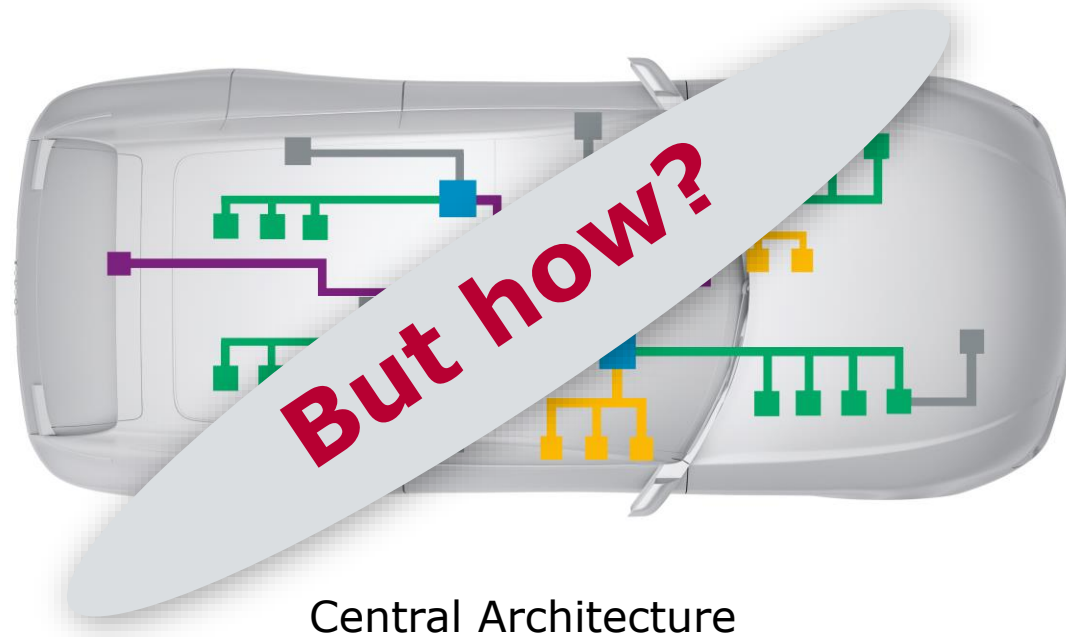

Evolution of Vehicle Architectures

Domain Architecture

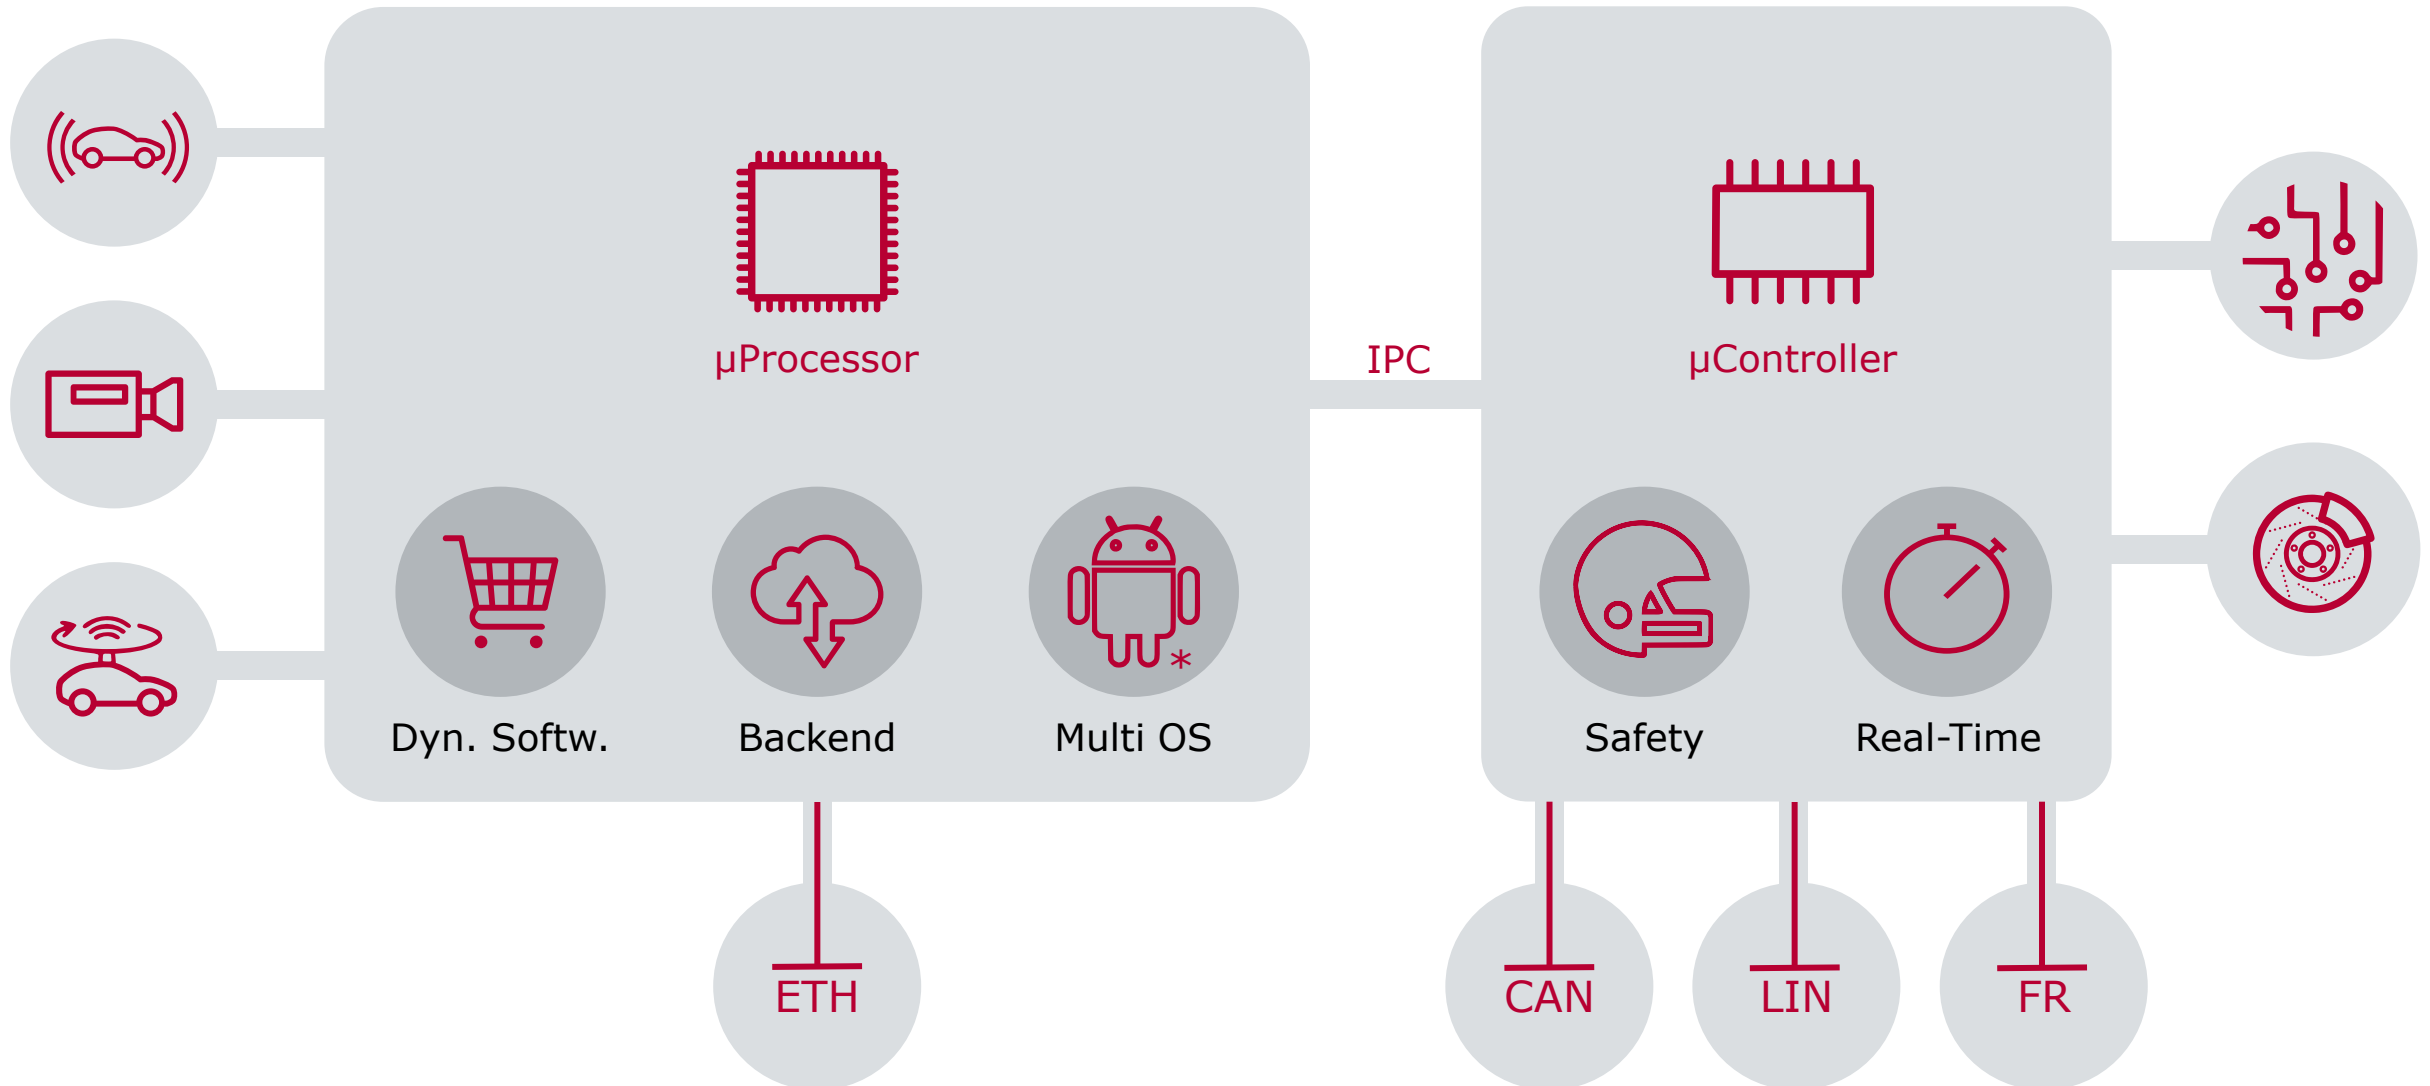

- ▶ Functions integrated per domain
- ▶ Multiple application software supplier per ECU
- ▶ High-level functionality of sensors and actuators already reduced and moved to Domain Controllers

Evolution of Vehicle Architectures

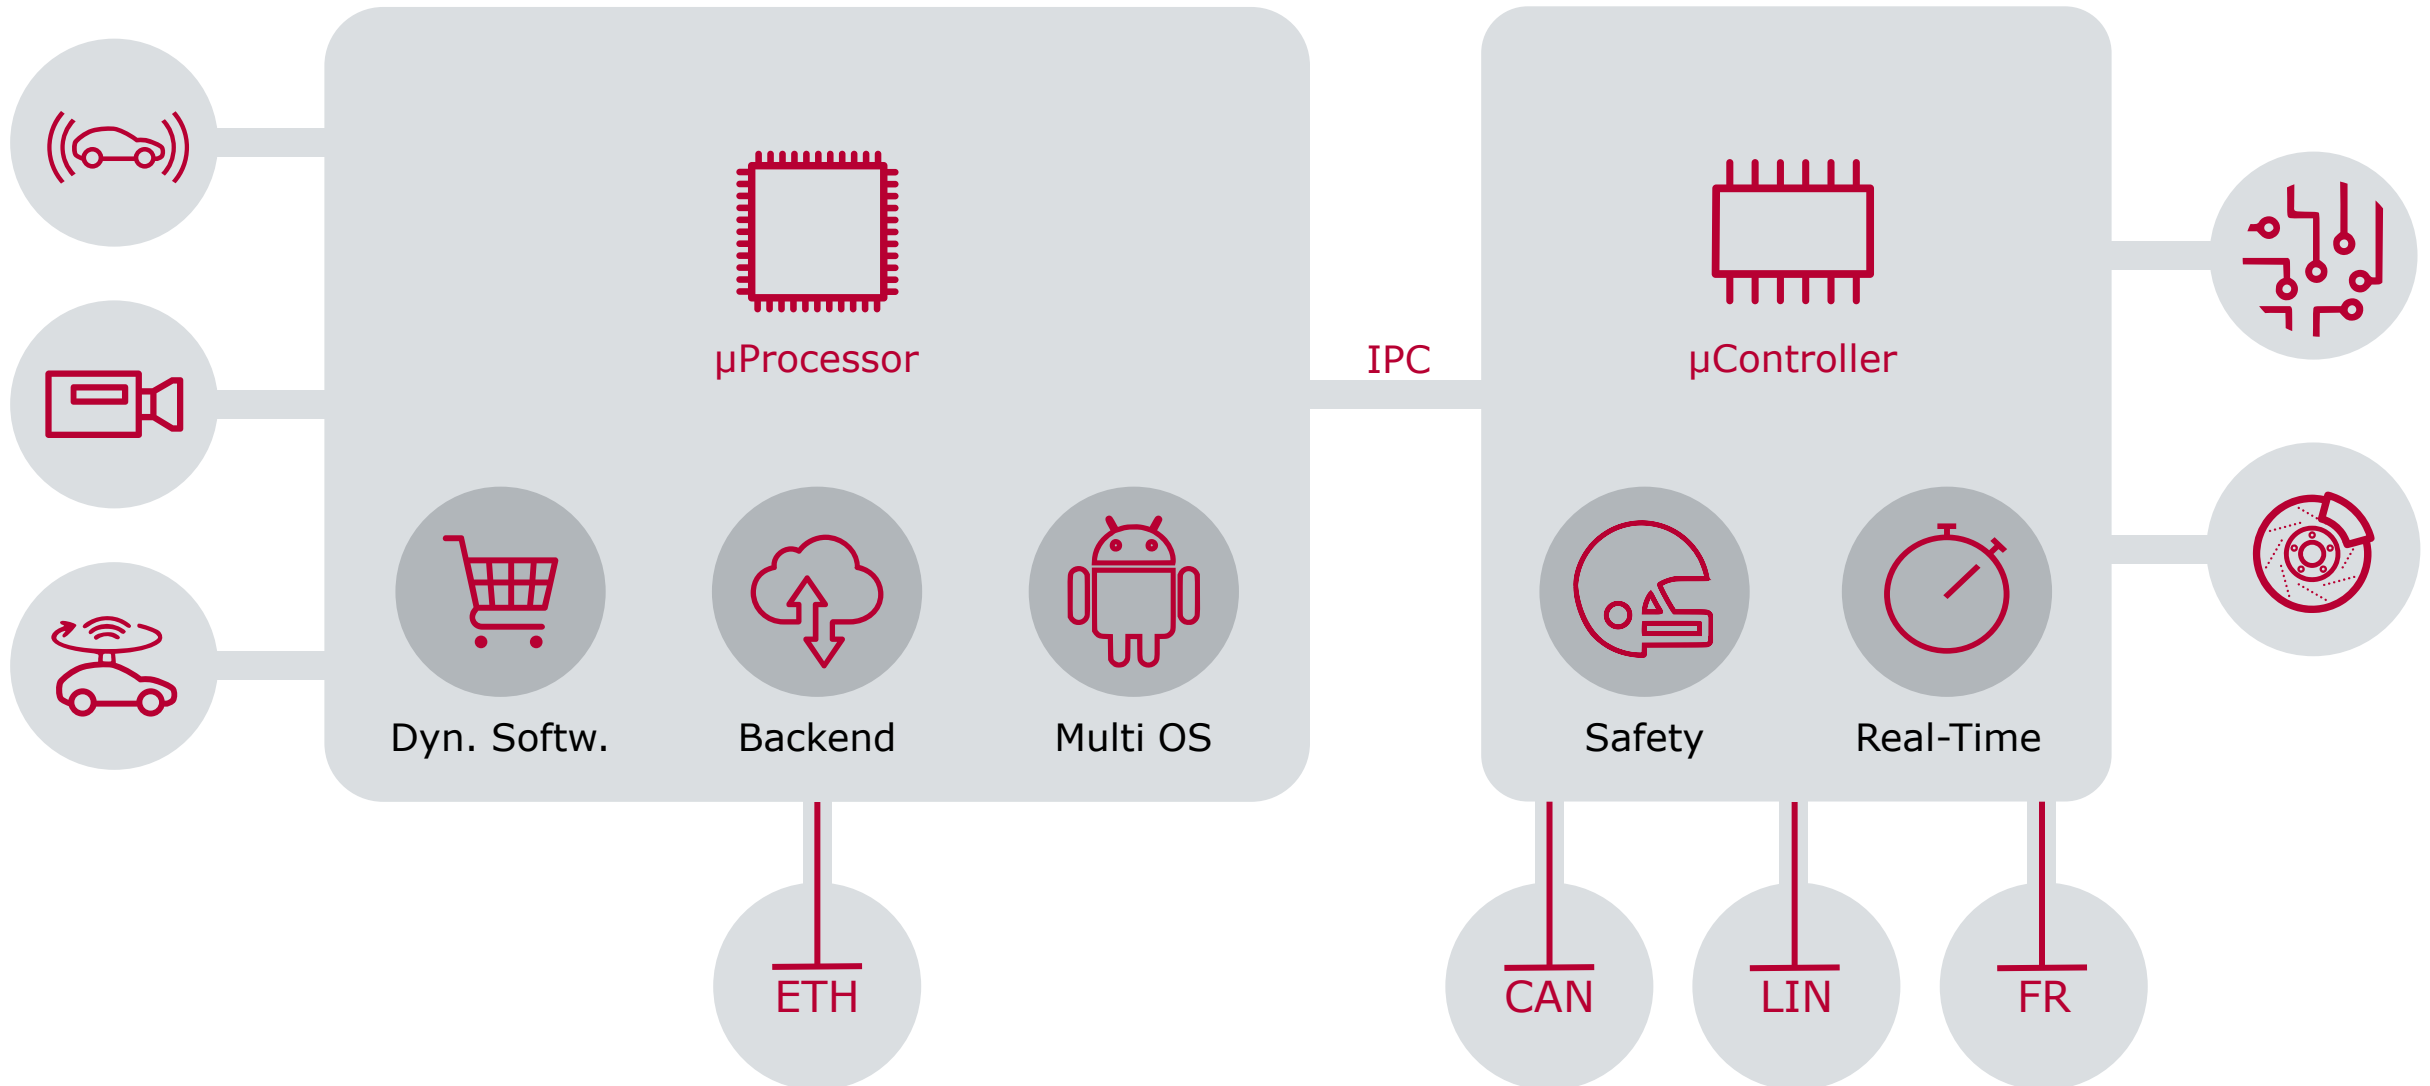

- ▶ Cost Saving
 - ▶ More COTS
 - ▶ More software reuse
 - ▶ Reduce number of ECUs
- ▶ Easy extension of functionality
- ▶ Keep rolled-out ECUs up to date

What About Updates?

Integrating Application Software in AUTOSAR Stack

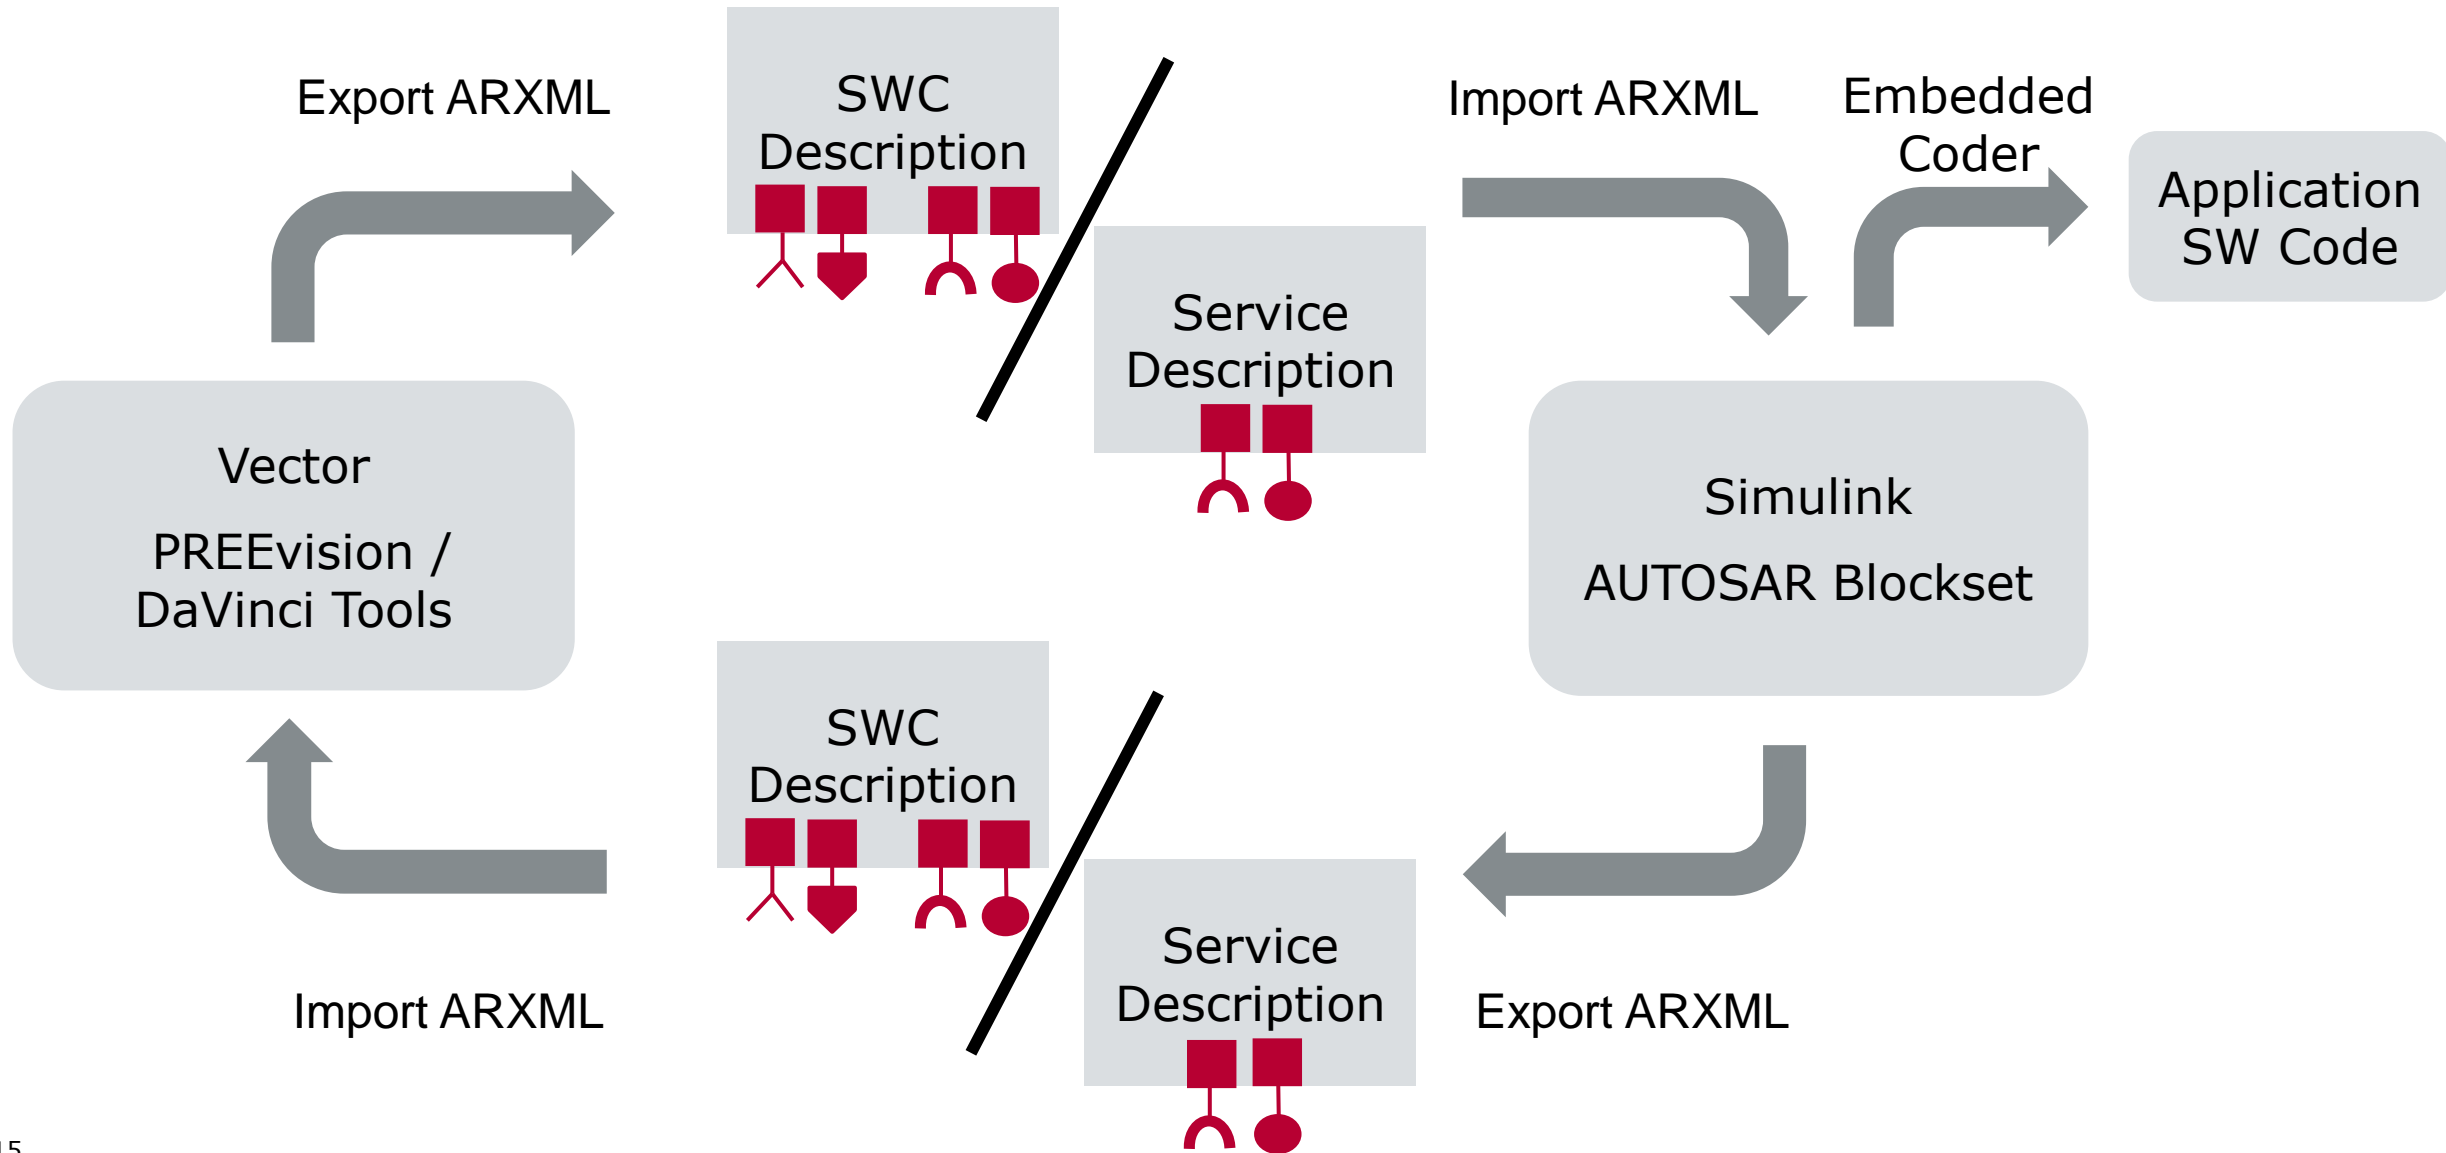

Poll question

▶ Which tool(s) do you use during your project work as an Application Developer apart from MATLAB?

Please choose from the following (Multiselect possible):

- Davinci Developer
- Davinci Configurator Pro
- PREEvision
- Other
- None

AUTOSAR Workflows - Importing and Exporting AUTOSAR Description

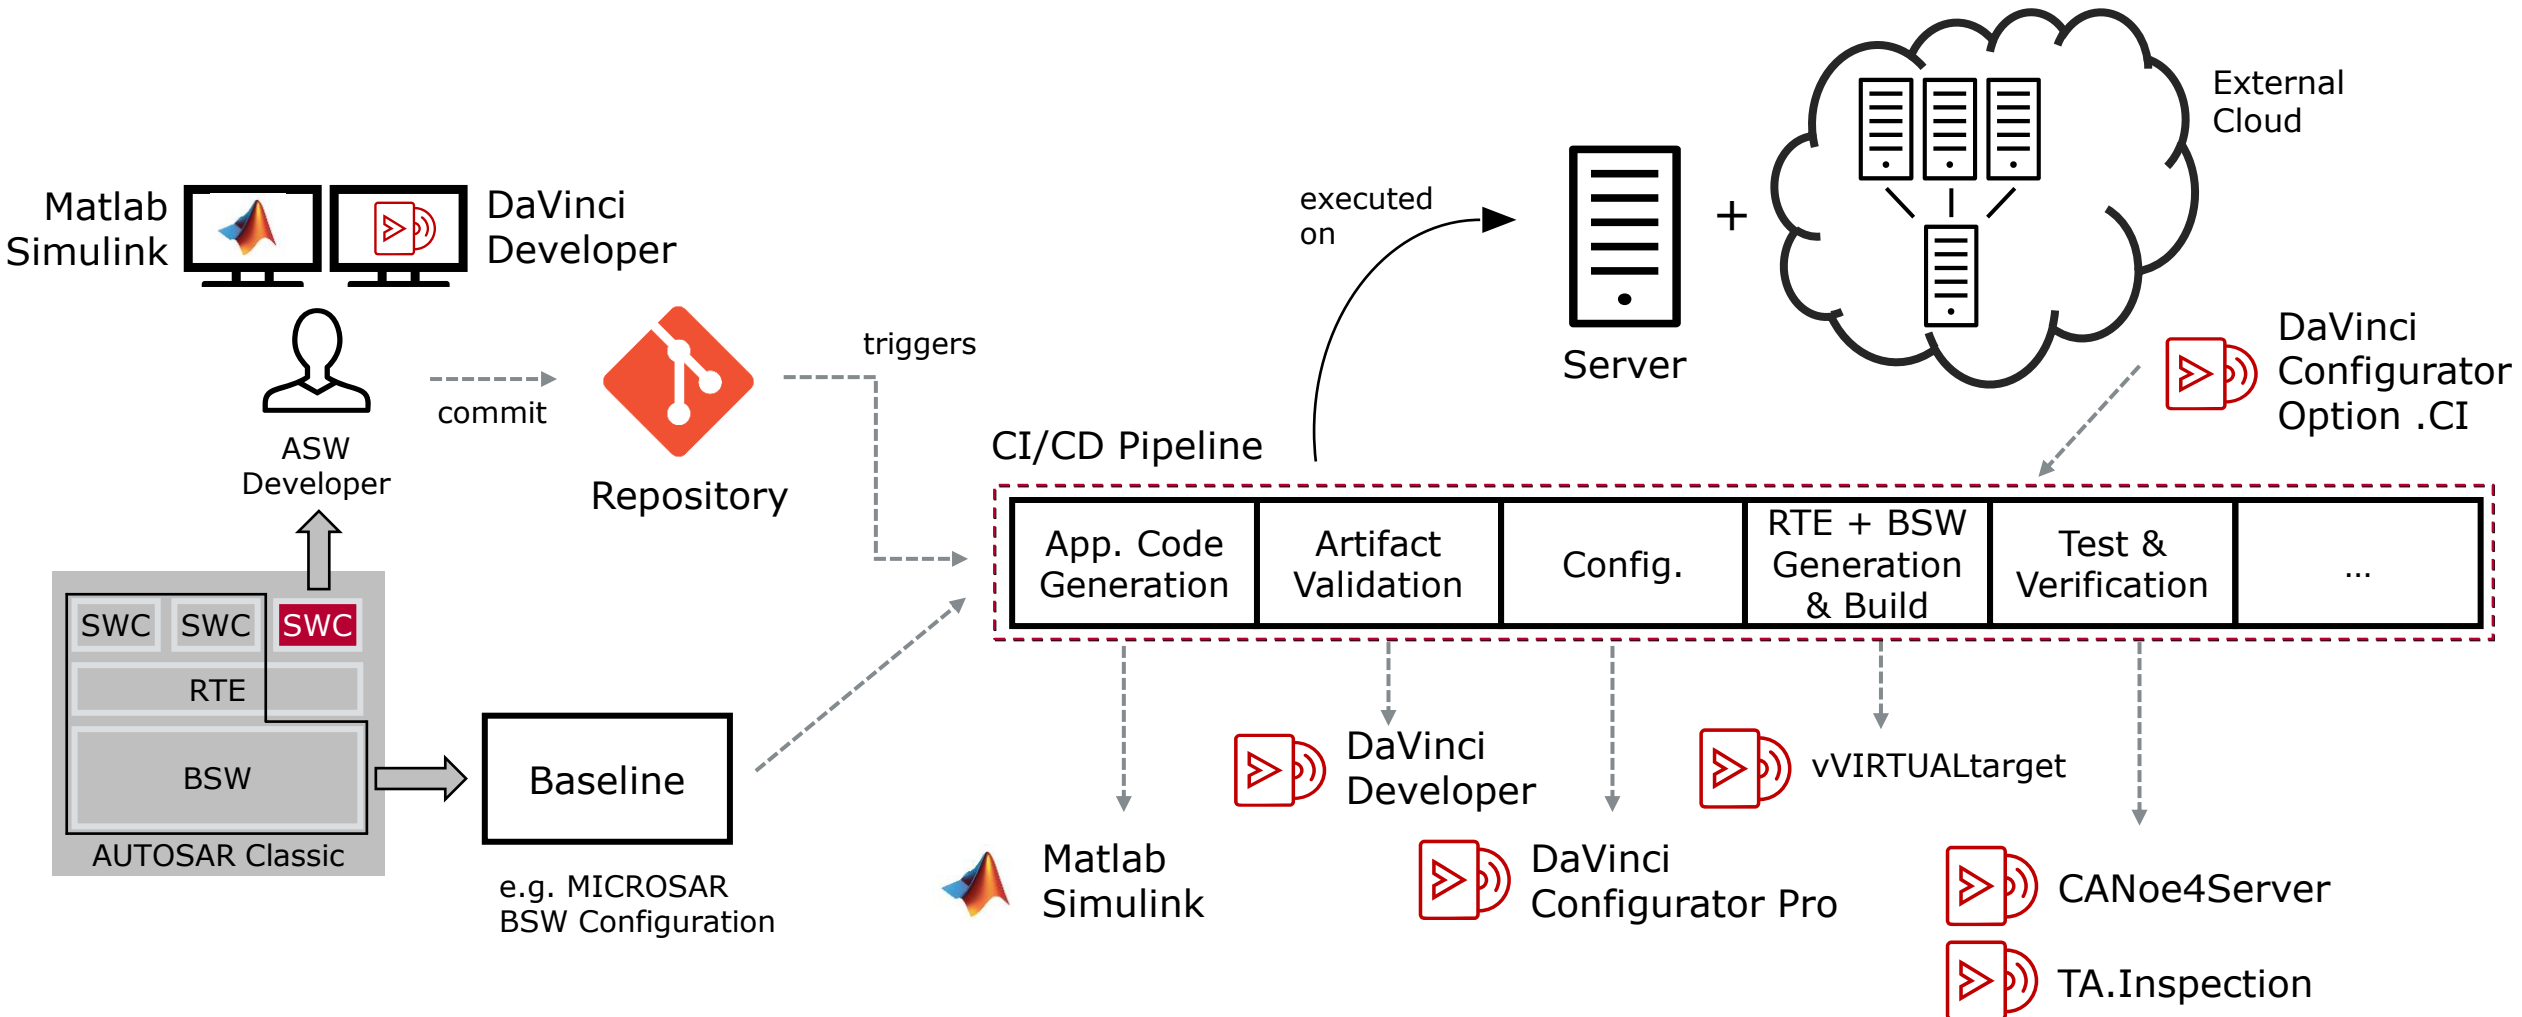

Poll question

- ▶ Who is doing the Application Software integration (which role) and using which method – manual integration or automatically in a continuous integration workflow?

Please choose from the following (Multiselect possible) :

- Method: Manual Integration OR
- Method: Automatic /Continuous Integration (CI)
- Role: Developer
- Role: Integrator
- Role: System Responsible
- Role: DevOps Engineer

Continuous Integration for AUTOSAR Classic Platform

Poll question

- ▶ How often is an Application Software integration typically done (manually or automatically/CI) in total within a month by the previously mentioned role(s)?

Please choose one of the following:

1 - 10

11 - 30

31 – 60

61 – 120

> 120

Poll question

► How much time do you wait for a scheduled Application Software integration?

Please choose one of the following:

- Zero. Application Software Integration is done by me.
- About 1 day
- < 1 week
- < 2 weeks
- < 4 weeks

Practical Example – AUTOSAR Adaptive Platform Development

Webinar – AUTOSAR SOME/IP with MathWorks & Vector Tools

- ▶ Seamless interaction of DaVinci Developer Adaptive & Simulink for development of AUTOSAR Adaptive Platform
- ▶ Signal & Service-Oriented communication in AUTOSAR
- ▶ Overview of SOME/IP as AUTOSAR middleware
- ▶ Modeling of SOME/IP applications for Service-Oriented software architectures

Webinar
2021-04-13
17:00 (Europe/Berlin)
Duration: 1h
Language: English
Panelists: Francisco Gonzalez and Shwetha Bhadravathi Patil

Modeling of AUTOSAR SOME/IP Applications with MathWorks Simulink® and Integration with Vector Tools

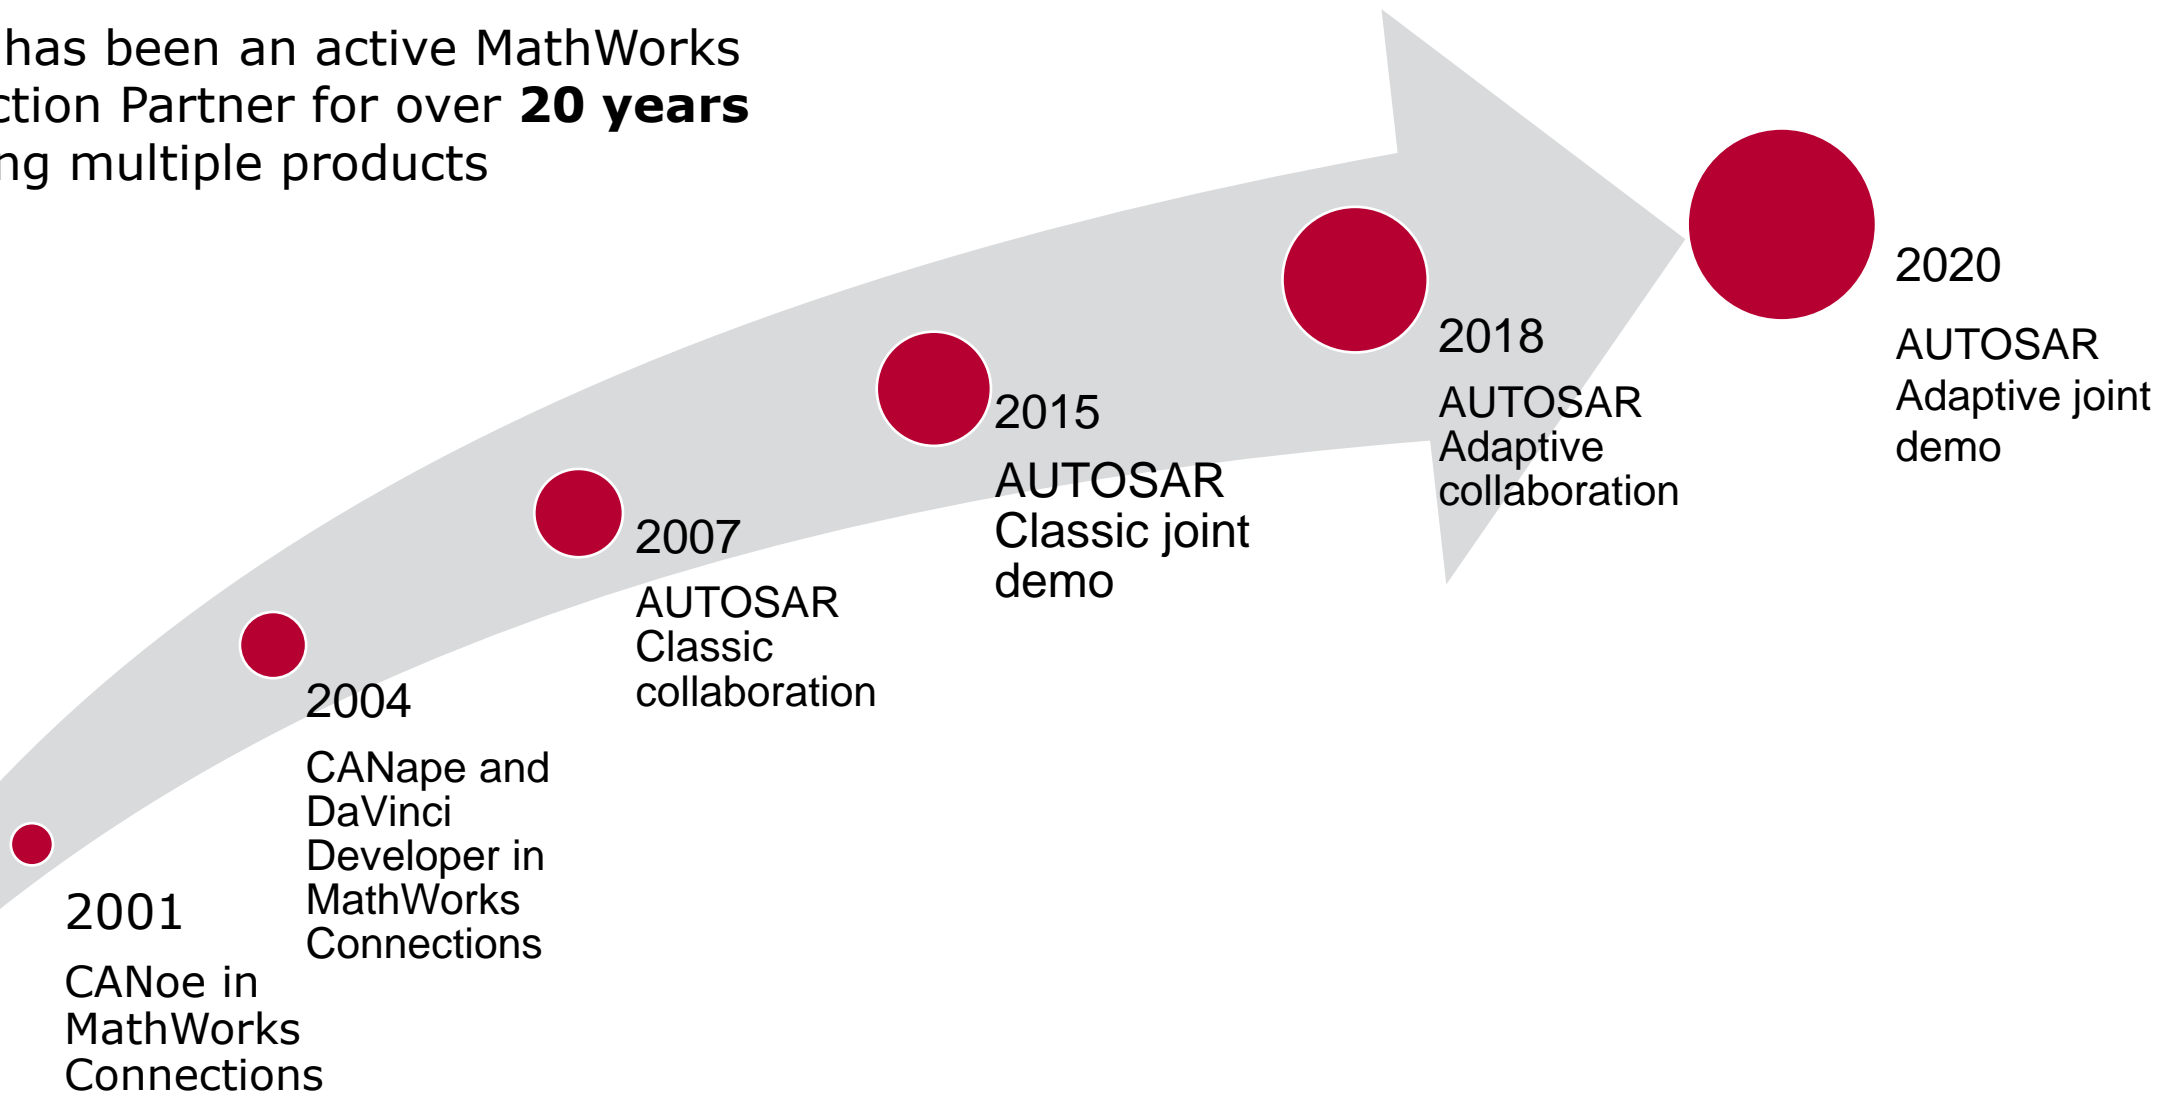

AUTOSAR Classic is the proven standard for applications such as powertrain, chassis, body and interior electronics. The Adaptive platform focuses on high-performance ECUs and on-board computers that are often used in autonomous systems. Adaptive is based on POSIX and C++, it supports dynamic and updatable software as well as services-oriented communication. Adaptive and Classic complement each other and can co-exist in modern cars.

In this webinar, MathWorks and Vector introduce the AUTOSAR Adaptive concepts and showcases how the MathWorks Simulink® product family offers support for Adaptive and integration together with Vector AUTOSAR tools.

Partnership for Providing Seamless Automotive Tool Chains

Vector has been an active MathWorks Connection Partner for over **20 years** spanning multiple products

Conclusion

- ▶ Software is split-up across controllers and processor
- ▶ Multiple difficult challenges to face during development of new hardware and software architectures
- ▶ AUTOSAR is a common language for standardized integration of application software, but tools must understand the dialect
- ▶ Automation support of tools are preconditions for Continuous Integration and Continuous Delivery approaches

- ▶ Integration of functional modeling tools and AUTOSAR modeling & configuration tools to an automation pipeline:
 - ▶ Heavily reduces manual steps
 - ▶ Enables fast testing of new features
 - ▶ Increases quality due to reduction of manual errors

- ▶ **Vector and MathWorks are helping you to get it done!**
